1. Precaution

1.1 Safety Precaution

- To prevent injury to the user or other people and property damage, the following instructions must be followed.
- Incorrect operation due to ignoring instruction will cause harm or damage.
- Before service the unit, be sure to read this service manual at first.

1.2 Warning

Installation

■ Do not use a defective or underrated circuit breaker. Use this appliance on a dedicated circuit.

There is risk of fire or electric shock.

■ For electrical work, contact the dealer, seller, a qualified electrician, or an authorized service center.

Do not disassemble or repair the product, there is risk of fire or electric shock.

Always ground the product.

There is risk of fire or electric shock.

■ Install the panel and the cover of control box securely.

There is risk of fire of electric shock.

■ Always install a dedicated circuit and breaker.

Improper wiring or installation may cause fore or electric shock.

■ Use the correctly rated breaker of fuse.

There is risk of fire or electric shock.

■ Do not modify or extend the power cable.

There is risk of fire or electric shock.

■ Do not install, remove, or reinstall the unit by yourself (customer).

There is risk of fire, electric shock, explosion, or injury.

Be caution when unpacking and

installing the product.

Sharp edges could cause injury, be especially careful of the case edges and the fins on the condenser and evaporator.

- For installation, always contact the dealer or an authorized service center.
- Do not install the product on a defective installation stand.
- Be sure the installation area does not deteriorate with age.

If the base collapses, the air conditioner could fall with it, causing property damage, product failure, and personal injury.

- Do not let the air conditioner run for a long time when the humidity is very high and a door or a window is left open.
- Take care to ensure that power cable could not be pulled out or damaged during operation.

There is risk of fire or electric shock.

■ Do not place anything on the power cable.

There is risk of fire or electric shock.

■ Do not plug or unplug the power supply plug during operation.

There is risk of fire or electric shock.

- Do not touch (operation) the product with wet hands.
- Do not place a heater or other appliance near the power cable.

There is risk of fire and electric shock.

■ Do not allow water to run into electrical parts.

It may cause fire, failure of the product, or electric shock.

■ Do not store or use flammable gas or combustible near the product.

There is risk of fire or failure of product.

■ Do not use the product in a tightly closed space for a long time.

Oxygen deficiency could occur.

- When flammable gas leaks, turn off the gas and open a window for ventilation before turn the product on.
 - If strange sounds or smoke comes

from product, turn the breaker off or disconnect the power supply cable.

There is risk of electric shock or fire.

■ Stop operation and close the window in storm or hurricane. If possible, remove the product from the window before the hurricane arrives.

There is risk of property damage, failure of product, or electric shock.

■ Do not open the inlet grill of the product during operation. (Do not touch the electrostatic filter, if the unit is so equipped.)

There is risk of physical injury, electric shock, or product failure.

■ When the product is soaked, contact an authorized service center.

There is risk of fire or electric shock.

■ Be caution that water could not enter the product.

There is risk of fire, electric shock, or product damage.

■ Ventilate the product from time to time when operating it together with a stove etc.

There is risk of fire or electric shock.

■ Turn the main power off when cleaning or maintaining the product.

There is risk of electric shock.

■ When the product is not be used for a long time, disconnect the power supply plug or turn off the breaker.

There is risk of product damage or failure, or unintended operation.

■ Take care to ensure that nobody could step on or fall onto the outdoor unit.

This could result in personal injury and product damage.

> CAUTION

■ Always check for gas (refrigerant) leakage after installation or repair of product.

Low refrigerant levels may cause failure of product.

Install the drain hose to ensure that

water is drained away properly.

A bad connection may cause water leakage.

■ Keep level even when installing the product.

It can avoid vibration of water leakage.

■ Do not install the product where the noise or hot air from the outdoor unit could damage the neighborhoods.

It may cause a problem for your neighbors.

- Use two or more people to lift and transport the product.
- Do not install the product where it will be exposed to sea wind (salt spray) directly.

It may cause corrosion on the product.

Corrosion, particularly on the condenser and evaporator fins, could cause product malfunction or inefficient operation.

> Operational

- Do not expose the skin directly to cool air for long time. (Do not sit in the draft).
- Do not use the product for special purposes, such as preserving foods, works of art etc. It is a consumer air conditioner, not a precision refrigerant system.

There is risk of damage or loss of property.

- Do not block the inlet or outlet of air flow.
- Use a soft cloth to clean. Do not use harsh detergents, solvents, etc.

There is risk of fire, electric shock, or damage to the plastic parts of the product.

- Do not touch the metal parts of the product when removing the air filter. They are very sharp.
- Do not step on or put anything on the product. (outdoor units)
- Always insert the filter securely.
 Clean the filter every two weeks or more often if necessary.

A dirty filter reduces the efficiency of the air conditioner and could cause product malfunction or damage.

Do not insert hands or other objects

through air inlet or outlet while the product is operated.

- Do not drink the water drained from the product.
- Use a firm stool or ladder when cleaning or maintaining the product.

Be careful and avoid personal injury.

■ Replace the all batteries in the remote control with new ones of the same type. Do not mix old and new batteries or different types of batteries.

There is risk of fire or explosion.

■ Do not recharge or disassemble the batteries. Do not dispose of batteries in a fire.

They may burn of explode.

■ If the liquid from the batteries gets onto your skin or clothes, wash it well with clean water. Do not use the remote of the batteries have leaked.

2. Model List

Model Names of Indoor/Outdoor Units

	Capacity	Indoor units	Outdoor units
	9K	MSABA-09CRDN1-BP0W	MOBA30-09CFN1-BP0W

5 Installation Details

5.1 Wrench torque sheet for installation

Outside	diameter	Torque	Additional tightening torque
mm	inch	N.cm	N.cm
Ф6.35	1/4	1500(153kgf.cm)	1600(163kgf.cm)
Ф9.52	3/8	2500(255kgf.cm)	2600(265kgf.cm)
Ф12.7	1/2	3500(357kgf.cm)	3600(367kgf.cm)
Ф15.9	5/8	4500(459kgf.cm)	4700(479kgf.cm)
Ф19	3/4	6500(663kgf.cm)	6700(683kgf.cm)

5.2 Connecting the cables

The power cord of connect should be selected according to the following specifications sheet.

Rated current of appliance	Nominal cross-sectional area (mm²)
>3 and ≤6	0.75
>6 and ≤10	1
>10 and ≤16	1.5
>16 and ≤25	2.5

The cable size and the current of the fuse or switch are determined by the maximum current indicated on the nameplate which located on the side panel of the unit. Please refer to the nameplate before selecting the cable, fuse and switch.

5.3 Pipe length and the elevation

The pipe length and refrigerant amount:

Model	Pipe	Pipe size		Max. Elevation	Max. Length	Additional refrigerant
model	Gas	Liquid	length (m)	B (m)	A (m)	(g/m)
MSABA-09CRDN1-BP0W+MOBA30-09CFN1-BP0W	3/8" (Ф9.52)	1/4" (Ф6.35)	7.5	10	25	15
MSABA-09CRDN1-MP0W+MOBA30-09CFN1-MP0W	3/8" (Ф9.52)	1/4" (Ф6.35)	7.5	10	25	15
MSABA-09HRFN1-BQ0W+MOBA30-09HDN1-BQ0W	3/8" (Ф9.52)	1/4" (Ф6.35)	7.5	10	25	15
MSABA-09HRFN1-MQ0W+MOBA30-09HDN1-MQ0W	3/8" (Ф9.52)	1/4" (Ф6.35)	7.5	10	25	15
MSABB-12CRDN1-BP0W+MOBA30-12CFN1-BP0W	1/2" (Ф12.7)	1/4" (Ф6.35)	7.5	10	25	15
MSABB-12CRDN1-MP0W+MOBA30-12CFN1-MP0W	1/2" (Ф12.7)	1/4" (Ф6.35)	7.5	10	25	15
MSABB-12HRFN1-BQ0W+MOBA30-12HDN1-BQ0W	1/2" (Ф12.7)	1/4" (Ф6.35)	7.5	10	25	15
MSABB-12HRFN1-MQ0W+MOBA30-12HDN1-MQ0W	1/2" (Ф12.7)	1/4" (Ф6.35)	7.5	10	25	15
MSABD-18CRDN1-MC4G+MOB30-18CDN1-MC4G	1/2" (Ф12.7)	1/4" (Ф6.35)	7.5	20	30	15
MSABD-18HRFN1-MQ0W+MOB30-18HDN1-MQ0W	1/2" (Ф12.7)	1/4" (Ф6.35)	7.5	20	30	15
MSABE-23CRDN1-MP0W+MOCA30-23CFN1-MP0W	5/8" (Φ15.9)	3/8" (Ф9.52)	7.5	20	30	30
MSABE-23HRFN1-MQ0W+MOCA30-23HDN1-MQ0W	5/8" (Φ15.9)	3/8" (Ф9.52)	7.5	25	50	30
MSABF-30HRFN1-MR0W +MOD30-30HFN1-MR0W	5/8" (Φ15.9)	3/8" (Ф9.52)	7.5	25	50	30
MSABF-36HRFN1-MP0W+MOD30-36HFN1-MP0W	5/8" (Φ15.9)	3/8" (Ф9.52)	7.5	25	50	30

Caution:

The capacity test is based on the standard length and the maximum permissive length is based on the

system reliability.

5.4 Installation for the first time

Air and moisture in the refrigerant system have undesirable effects as below:

- Pressure in the system rises.
- Operating current rises.
- Cooling or heating efficiency drops.
- Moisture in the refrigerant circuit may freeze and block capillary tubing.
- Water may lead to corrosion of parts in the refrigerant system.

Therefore, the indoor units and the pipes between indoor and outdoor units must be leak tested and evacuated to remove gas and moisture from the system.

Gas leak check (Soap water method):

Apply soap water or a liquid neutral detergent on the indoor unit connections or outdoor unit connections by a soft brush to check for leakage of the connecting points of the piping. If bubbles come out, the pipes have leakage.

1. Air purging with vacuum pump

- Completely tighten the flare nuts of the indoor and outdoor units, confirm that both the 2-way and 3-way valves are set to the closed position.
- Connect the charge hose with the push pin of handle lo to the 3-way valves gas service port..
- 3) Connect the charge hose of handle hi

- connection to the vacuum pump.
- 4) Fully open the handle Lo of the manifold valve.
- 5) Operate the vacuum pump to evacuate.
- 6) Make evacuation for 30 minutes and check whether the compound meter indicates -0.1Mpa. If the meter does not indicate -0.1Mpa after pumping 30 minutes, it should be pumped 20 minutes more. If the pressure can't achieve -0.1Mpa after pumping 50 minutes, please check if there are some leakage points.

Fully close the handle Lo valve of the manifold valve and stop the operation of the vacuum pump. Confirm that the gauge needle does not move (approximately 5 minutes after turning off the vacuum pump).

7) Turn the flare nut of the 3-way valves about 45° counterclockwise for 6 or 7seconds after the gas

coming out, then tighten the flare nut again. Make sure the pressure display in the pressure indicator is a little higher than the atmosphere pressure. Then remove the charge hose from the 3 way valve.

8) Fully open the 2 way valve and 3 way valve and securely tighten the cap of the 3 way valve.

2. Air purging by refrigerant

Procedure:

- 1). Confirm that both the 2-way and 3-way valves are set to the closed position.
- 2). Connect the charge set and a charging cylinder to the service port of the 3-way valve.

3). Air purging.

Open the valves on the charging cylinder and the charge set. Purge the air by loosening the flare nut on the 2-way valve approximately 45' for 3 seconds then closing it for 1 minute; repeat 3 times.

After purging the air, use a torque wrench to tighten the flare nut on the 2-way valve.

4). Check the gas leakage.

Check the flare connections for gas leakage.

5). Discharge the refrigerant.

Close the valve on the charging cylinder and discharge the refrigerant by loosening the flare nut on the 2-way valve approximately 45' until the gauge indicates 0.3 to 0.5 Mpa.

6). Disconnect the charge set and the charging cylinder, and set the 2-way and 3-way valves to the open position.

Be sure to use a hexagonal wrench to operate the valve stems.

7). Mount the valve stems nuts and the service port cap.

Be sure to use a torque wrench to tighten the service port cap to a torque 18N·m.

Be sure to check the gas leakage.

5.5 Adding the refrigerant after running the system for many years

Procedure:

1). Connect the charge hose to the 3-way service port, open the 2-way valve and the 3-way valve. Connect the charge hose to the valve at the bottom of the cylinder. If the refrigerant is R410A, make the cylinder bottom up to ensure

liquid charge.

2). Purge the air from the charge hose.

Open the valve at the bottom of the cylinder and press the check valve on the charge set to purge the air (be careful of the liquid refrigerant).

- 3) Put the charging cylinder onto the electronic scale and record the weight.
- 4) Operate the air conditioner at the cooling mode.
- 5) Open the valves (Low side) on the charge set and charge the system with liquid refrigerant.
- 6). When the electronic scale displays the proper weight (refer to the gauge and the pressure of the low side), disconnect the charge hose from the 3-way valve's service port immediately and turn off the air conditioner before disconnecting the hose.
- 7). Mount the valve stem caps and the service port

Use torque wrench to tighten the service port cap to a torque of 18N.m.

Be sure to check for gas leakage.

5.6 Re-installation while the indoor unit need to be repaired

1. Collecting the refrigerant into the outdoor unit

Procedure

1). Confirm that both the 2-way and 3-way valves are set to the opened position

Remove the valve stem caps and confirm that the valve stems are in the opened position.

Be sure to use a hexagonal wrench to operate the valve stems.

- 2). Connect the charge hose with the push pin of handle lo to the 3-way valves gas service port.
- 3). Air purging of the charge hose.

Open the handle Lo valve of the manifold valve slightly to purge air from the charge hose for 5 seconds and then close it quickly.

- 4). Set the 2-way valve to the close position.
- 5). Operate the air conditioner at the cooling cycle and stop it when the gauge indicates 0.1MPa.
- 6). Set the 3-way valve to the closed position immediately

Do this quickly so that the gauge ends up indicating 0.3 to 0.5Mpa.

Disconnect the charge set, and tighten the 2-way and 3-way valve's stem nuts.

Use a torque wrench to tighten the 3-way valves service port cap to a torque of 18N.m.

Be sure to check for gas leakage.

2. Air purging by the refrigerant

Procedure:

- 1). Confirm that both the 2-way and 3-way valves are set to the closed position.
- 2). Connect the charge set and a charging cylinder to the service port of the 3-way valve Leave the valve on the charging cylinder closed.
- 3). Air purging.

Open the valves on the charging cylinder and the charge set. Purge the air by loosening the flare nut on the 2-way valve approximately 45' for 3 seconds then closing it for 1 minute; repeat 3 times.

After purging the air, use a torque wrench to

tighten the flare nut on the 2-way valve.

4). Check the gas leakage

Check the flare connections for gas leakage.

5). Discharge the refrigerant.

Close the valve on the charging cylinder and discharge the refrigerant by loosening the flare nut on the 2-way valve approximately 45' until the gauge indicates 0.3 to 0.5 Mpa.

6). Disconnect the charge set and the charging cylinder, and set the 2-way and 3-way valves to the open position

Be sure to use a hexagonal wrench to operate the valve stems.

7). Mount the valve stems nuts and the service port cap

Be sure to use a torque wrench to tighten the service port cap to a torque 18N.m.

Be sure to check the gas leakage.

5.7 Re-installation while the outdoor unit need to be repaired

1. Evacuation for the whole system

Procedure:

- 1). Confirm that both the 2-way and 3-way valves are set to the opened position.
- 2). Connect the vacuum pump to 3-way valve's service port.
- 3). Evacuation for approximately one hour. Confirm that the compound meter indicates -0.1Mpa.
- 4). Close the valve (Low side) on the charge set, turn off the vacuum pump, and confirm that the gauge needle does not move (approximately 5

minutes after turning off the vacuum pump).

5). Disconnect the charge hose from the vacuum pump.

2. Refrigerant charging

Procedure:

1). Connect the charge hose to the charging cylinder, open the 2-way valve and the 3-way valve

Connect the charge hose which you disconnected from the vacuum pump to the valve at the bottom of the cylinder. If the refrigerant is R410A, make the cylinder bottom up to ensure liquid charge.

- 2). Purge the air from the charge hose Open the valve at the bottom of the cylinder and press the check valve on the charge set to purge the air (be careful of the liquid refrigerant).
- 3) Put the charging cylinder onto the electronic scale and record the weight.
- 4). Open the valves (Low side) on the charge set and charge the system with liquid refrigerant If the system cannot be charge with the specified amount of refrigerant, or can be charged with a little at a time (approximately 150g each time), operating the air conditioner in the cooling cycle; however, one time is not sufficient, wait approximately 1 minute and then repeat the procedure.
- 5). When the electronic scale displays the proper weight, disconnect the charge hose from the 3-way valve's service port immediately If the system has been charged with liquid refrigerant while operating the air conditioner,

turn off the air conditioner before disconnecting the hose.

6). Mounted the valve stem caps and the service port. Use torque wrench to tighten the service port cap to a torque of 18N.m.

Be sure to check for gas leakage.

6. Operation Characteristics

Mode	Cooling operation	Heating operation	Drying operation
Temperature			
Room temperature	17℃~32℃	0°C~30°C	10℃~32℃
	(62°F~90°F)	(32°F~86°F)	(50°F~90°F)
Outdoor temperature	0℃~50℃	-15℃~30℃	0℃~50℃
	(32°F~122°F)	(5°F~86°F)	(32°F~122°F)
	-15℃~50℃ (5°F~122°F) (For the models with low temperature cooling system)		

CAUTION:

- 1. If the air conditioner is used beyond the above conditions, certain safety protection features may come into operation and cause the unit to operate abnormally.
- 2. The room relative humidity should be less than 80%. If the air conditioner operates beyond this figure, the surface of the air conditioner may attract condensation. Please set the vertical air flow louver to its maximum angle (vertically to the floor), and set HIGH fan mode.
 - 3. The optimum performance will be achieved during this operating temperature zone.

7. Electronic function

7.1 Abbreviation

T1: Indoor room temperature

T2: Coil temperature of evaporator

T3: Coil temperature of condenser

T4: Outdoor ambient temperature

TP: Compressor discharge temperature

7.2 Display function

7.2.1 Icon explanation on indoor display board.

Digital display:

Displays the temperature settings when the air conditioner is operational.

Displays the room temperature in FAN mode.

Displays the self-diagnostic codes.

Dispalys '**DF**', for three seconds when Fresh, Swing, Turbo or Silence feature is cancelled.

Dispalys '**JF**, under deforsting operation.

Dispalys '**L**, when anti-cold air feature is activated under heating mode.

Dispalys '**5**C', during self clean operation (if aplicable).

Dispalys '**FP**, under 8°C heating operation (if aplicable).

When ECO function(optional) is actived,the

"BB" illuminates gradually one by one as E→C→D→set temperature→E

In one second interval.

NOTE:

A guide on using the infrared remote is not included in this literature package.

7.3 Main Protection

7.3.1 Three minutes delay at restart for compressor

1 minute delay for the 1st time start-up and 3 minutes delay for others.

7.3.2 Temperature protection of compressor top

The unit will stop working when the compressor top temp. protector cut off, and will restart after the compressor top temp. protector restart.

7.3.3 Temperature protection of compressor discharge

Compressor discharge temp. TP>115 $^{\circ}$ C for 5s, compressor stops.

7.3.4 Fan speed is out of control

When indoor fan speed keeps too low (300RPM) for certain time, the unit will stop and the LED will display the failure

7.3.5 Inverter module protection

The Inverter module has a protection function about current, voltage and temperature. If these protections happen, the corresponding code will display on indoor unit and the unit will stop working.

7.3.6 Indoor fan delayed open function

When the unit starts up, the louver will be active immediately and the indoor fan will open 7s later.

If the unit runs in heating mode, the indoor fan will be also controlled by anti-cold wind function.

7.3.7 Compressor preheating functions

Preheating permitting condition:

When T4(outdoor ambient temperature) < 3°C, the preheating function will be activated.

7.3.8 Sensor protection at open circuit and breaking disconnection.

When there's only one temperature sensor in malfunction, the air conditioner will keep working but show the error code, in case of any emergency use.

When there's more than one temperature sensor in malfunction, the air conditioner will stop working.

7.3.9 Refrigerant leakage detection

This function is only active in cooling mode. It can better prevent the compressor being damaged by refrigerant leakage or compressor overload.

Open condition:

When compressor is active, the value of the Coil temperature of evaporator T2 has no change or very little change.

7.3.10 Zero crossing detection error protection

If AC detects time interval is not correct for continuous 240s, the unit will stop and the LED will display the failure. The correct zero crossing signal time interval should be between 6-13ms.

7.4 Operation Modes and Functions

7.4.1 Fan mode

- (1) Outdoor fan and compressor stop.
- (2) Temperature setting function is disabled, and no setting temperature is displayed.
- (3) Indoor fan can be set to high/med/low/auto.
- (4) The louver operates same as in cooling mode.
- (5) Auto fan:

7.4.2 Cooling Mode

7.4.2.1 Compressor running rules

When T1-Ts< Δ T -2°C, the compressor will stop, when T1—Ts > Δ T -0.5°C, the compressor will be activated.

 ΔT is the programmed parameter of temperature compensation.

When the AC run in mute mode, the compressor will run with low frequency.

When the current is more than setting value, the current protection function will be activated, and the compressor will stop.

7.4.2.2 Outdoor fan running rules

The outdoor unit will be run at different fan speed according to T4.

For different outdoor units, the fan speeds are different.

For MSABA-09CRDN1-BP0W,

MSABA-09CRDN1-MP0W,

MSABB-12CRDN1-MP0W,

MSABB-12CRDN1-BP0W,

MSABE-23CRDN1-MP0W,

MSABF-30HRFN1-MR0W,

MSABF-36HRFN1-MP0W models,

For MSABA-09HRFN1-BQ0W,
MSABA-09HRFN1-MQ0W,
MSABB-12HRFN1-BQ0W,
MSABB-12HRFN1-MQ0W,MSABD-18CRDN1-MC4G, MSABD-18HRFN1-MQ0W,
MSABE-23HRFN1-MQ0W models,

7.4.2.3 Indoor fan running rules

In cooling mode, indoor fan runs all the time and the speed can be selected as high, medium, low and auto.

The indoor fan is controlled as below:

 $Td=Ts+\Delta t$

14-101		
Setting fan speed	T1-Td ℃(°F)	Actual fan speed
	1	H+ (H+=H+G)
н	A\	H (=H)
"	B	H- (H-=H-G)
		M+(M+=M+Z)
М	D	M (M=M)
IVI	E	M- (M-=M-Z)
	1	L+(L+=L+D)
	G\ /	L (L=L)
	H	L-(L-=L-D)

The auto fan acts as below rules:

7.4.2.4 Condenser temperature protection

When condenser temperature temp. is more than setting value, the compressor will stop.

7.4.2.5 Evaporator temperature protection

When Evaporator temperature temp.is less than setting value, the compressor will stop.

7.4.3 Heating Mode (for heat pump models)

7.4.3.1 Compressor running rules

When T1-Ts>- Δ T, the compressor will stop, when T1-Ts< Δ T-1.5, the compressor will be on. Δ T is the programmed parameter of temperature compensation.

When the AC run in mute mode, the compressor will run with low frequency. When the current is more than setting value, the current protection function will be activated and the compressor will stop.

7.4.3.2 Outdoor fan running rules

The outdoor unit will be run at different fan speed according to T4.

For different outdoor units, the fan speeds are different.

For MSABF-30HRFN1-MR0W, MSABF-36HRFN1-MP0W models,

For MSABA-09HRFN1-BQ0W, MSABA-09HRFN1-MQ0W, MSABB-12HRFN1-BQ0W, MSABB-12HRFN1-MQ0W MSABD-18HRFN1-MQ0W, MSABE-23HRFN1-MQ0W models,

7.4.3.3 Indoor fan running rules

When the compressor is on, the indoor fan can be set to high/med/low/auto. And the anti-cold wind function has the priority.

The indoor fan is controlled as below:

Td=Ts+ ∆ t

Setting fan speed	T1-Td ℃(°F)	Actual fan speed
	7	H+ (H+=H+G)
н	A\	H (=H)
''	B	H- (H-=H-G)
	1	M+(M+=M+Z)
М	D	M (M=M)
IVI	E F	M- (M-=M-Z)
	1	$\Gamma+(\Gamma+=\Gamma+D)$
	G\	L (L=L)
L	H	L-(L-=L-D)

Auto fan action in heating mode:

7.4.3.4 Defrosting mode

AC will enter the defrosting mode according to the value of temp. of T3 and the value range of temp. change of T3 and also the compressor running time.

During the defrosting mode, the compressor keep running, indoor and outdoor motor will stop, defrost lamp of the indoor unit will be lighted

If any one of the following items is satisfied, the defrosting will finish and the machine will turn to normal heating mode.

- ----T3 rises to be higher than TCDE1°C.
- ----The machine has run for 10 minutes in defrosting mode.

7.4.3.5 Evaporator coil temperature protection

Off: Compressor stops.

Decrease: Decrease the running frequency to the lower level.

Hold: Keep the current frequency. Resume: No limitation for frequency.

7.4.4 Auto-mode

This mode can be chosen with remote controller and the setting temperature can be changed between 17°C~30°C

In auto mode, the machine will choose cooling

In auto mode, the machine will choose cooling, heating or fan-only mode according to ΔT (ΔT =T1-Ts).

ΔT=T1-Ts	Running mode
Δ Τ>2℃	Cooling
-2≤ΔT≤2°C	Fan-only
ΔT<-2 ℃	Heating

Indoor fan will run at auto fan of the relevant mode.

The louver operates same as in relevant mode. If the machine switches mode between heating and cooling, the compressor will keep stopping for 15 minutes and then choose mode according to T1-Ts.

If the setting temperature is modified, the machine will choose running function again.

7.4.5 Drying mode

Indoor fan speed is fixed at breeze and can't be changed. The louver angle is the same as in cooling mode.

All protections are active and the same as that in cooling mode.

7.4.6 Forced operation function

Forced cooling mode:

The compressor and outdoor fan keep running and the indoor fan runs at low speed. After running for 30 minutes, AC will turn to auto mode with 24°C setting temperature.

Forced auto mode:

When AC receives signals, such as switch on, switch off, timer on, timer off, mode setting, fan

speed setting, sleeping mode setting, follow me setting, it will quit the forced operation.

7.4.7 Timer function

7.4.7.1 Timing range is 24 hours.

7.4.7.2 Timer on. The machine will turn on automatically when reaching the setting time.

7.4.7.3 Timer off. The machine will turn off automatically when reaching the setting time.

7.4.7.4 Timer on/off. The machine will turn on automatically when reaching the setting "on" time, and then turn off automatically when reaching the setting "off" time.

7.4.7.5 Timer off/on. The machine will turn off automatically when reaching the setting "off" time, and then turn on automatically when reaching the setting "on" time.

7.4.7.6 The timer function will not change the AC current operation mode. Suppose AC is off now, it will not start up firstly after setting the "timer off" function. And when reaching the setting time, the timer LED will be off and the AC running mode has not been changed.

7.4.7.7 The setting time is relative time.

7.4.7.8 The AC will quit the timer function when it has malfunction.

7.4.8 Sleep function

7.4.8.1 The sleep function is available in cooling, heating or auto mode.

7.4.8.2. Operation process in sleep mode is as follow:

When cooling, the setting temperature rises 1° C (be lower than 30° C) every one hour, 2 hours later the setting temperature stops rising and the indoor fan is fixed at low speed.

When heating, the setting temperature decreases 1° C (be higher than 17° C) every one hour, 2 hours later the setting temperature stops rising and indoor fan is fixed at low speed. (Anti-cold wind function has the priority).

7.4.8.3 Operation time in sleep mode is 7 hours. After 7 hours the AC quits this mode and turns off.

7.4.8.4 Timer setting is available

7.4.9 Auto-Restart function

The indoor unit is equipped with auto-restart function, which is carried out through an auto-restart module. In case of a sudden power failure, the module memorizes the setting conditions before the power failure. The unit will resume the previous operation setting (not including swing function) automatically after 3 minutes when power returns.

If the memorization condition is forced cooling mode, the unit will run in cooling mode for 30 minutes and turn to auto mode as 24° C setting temp.

If AC is off before power off and AC is required to start up now, the compressor will have 1 minute delay when power on. Other conditions, the compressor will have 3 minutes delay when restarts.

7.4.10 Refrigerant Leakage Detection

With this new technology, the display area will show "EC" when the outdoor unit detects refrigerant leakage. This function is only available in cooling mode.

7.4.11 Louver Position Memory Function

When starting the unit again after shutting down, its louver will restore to the angle originally set by the user, but the precondition is that the angle must be within the allowable range, if it exceeds, it will memorize the maximum angle of the louver. During operation, if the power fails or the end user shuts down the unit in the turbo mode, the louver will restore to the default angle.

7.4.12 8[°]C Heating(optional)

In heating operation, the preset temperature of the air conditioner can be as lower as 8° C, which keeps the room temperature steady at 8° C and prevents household things freezing when the house is unoccupied for a long time in severe cold weather.

7.4.13 Self clean (optional)

For heat pump models which are provided with this function, after running in cooling or drying mode, if the user press "Self Clean" button on remote controller, firstly, indoor unit runs in fan only mode for a while, then low heat operation and finally runs in fan only again. This function can keep the inside of indoor unit dry and prevent breeding of mold.

7.4.14 Follow me (optional)

- 1) If the indoor PCB receives the signal which results from pressing the FOLLOW ME button on remote controller, the buzzer will emit a sound and this indicates the follow me function is initiated. But when the indoor PCB receives signal which sent from remote controller every 3 minutes, the buzzer will not respond. When the unit is running with follow me function, the PCB will control the unit according to the temperature from follow me signal, and the temperature sensor will be shielded, but the error detective function of room temperature sensor will be still valid.
- 2) When the follow me function is available, the PCB will control the unit according to the room temperature from the remote controller and the setting temperature.
- The PCB will take action to the mode change information from remote controller signal, but it will not affected by the setting temperature.
- 4) When the unit is running with follow me function, if the PCB doesn't receive any signal from remote controller for 7 minutes or pressing FOLLOW ME button again, the follow me function will be turned off automatically, and the temperature will control the unit according to the room temperature detected from its own room temperature sensor and setting temperature.

Press the "silence" button on remote controller to initiate SILENCE function. When the Silence function is activated, the compressor running frequency will keep lower than F2 and the indoor unit will bring faint breeze, which will reduce the noise to the lowest level and create a quiet and comfortable room for you.

7.4.15 Silence operation (optional)

7.4.16 Point check function

Press the LED DISPLAY or LED or MUTE button of the remote controller three times, and then press the AIR DIRECTION or SWING button three times in ten seconds, the buzzer will keep ring for two seconds. The air conditioner will enter into the information enquiry status. You can press the LED DISPLAY or AIR DIRECTION button to check the next or front item's information.

When the AC enter the "information enquiry" status, it will display the code name in 2 seconds, the details are as follows.

Enquiry information	Displaying code	Meaning
T1	T1	Indoor room temp.
T2	T2	Indoor coil mid temp.
Т3	Т3	Outdoor coil temp.
T4	T4	Outdoor temp.
T2B	Tb	Indoor coil outlet temp.
TP	TP	Compressor discharge
		temp.
TH	TH	IPM modular temp.
Targeted Frequency	FT	Targeted Frequency
Actual Frequency	Fr	Actual Frequency
Indoor fan speed	IF	Indoor fan speed
Outdoor fan speed	OF	Outdoor fan speed
EXV opening angle	LA	EXV opening angle
Compressor continuous running time	CT	Compressor continuous
		running time
Causes of compressor stop.	ST	Causes of compressor
		stop.
Reserve	A0	
Reserve	A1	
Reserve	b 0	
Reserve	b 1	
Reserve	b 2	
Reserve	b 3	
Reserve	b 4

Reserve	0-FF		

8. Troubleshooting

Safety

Electricity power is still kept in capacitors even the power supply is shut off. Do not forget to discharge the electricity power in capacitor.

For other models, please connect discharge resistance (approx.100 Ω 40W) or soldering iron (plug) between +, - terminals of the electrolytic capacitor on the contrary side of the outdoor PCB.

Note: The picture above is only for reference. The plug of your side may be different.

8.1 Indoor Unit Error Display

Operation lamp	Timer lamp	Display	LED STATUS
☆ 1 time	Х	E0	Indoor unit EEPROM parameter error
☆ 2 times	Х	E1	Indoor / outdoor units communication error
☆ 3 times	Х	E2	Zero-crossing signal detection error
☆ 4 times	Х	E3	Indoor fan speed has been out of control
☆ 5 times	Х	E4	Indoor room temperature sensor T1 open circuit or short circuit
☆ 6 times	Х	E5	Evaporator coil temperature sensor T2 open circuit or short circuit
☆ 7 times	Х	EC	Refrigerant leakage detection

O (light) X (off) $\stackrel{\wedge}{\mathbf{x}}$ (flash)

*P3

- 1) In heating mode, when the outdoor temperature is lower than -25°C for 1 hour, the indoor unit display error code P3.
- 2) If the outdoor temperature is higher than -22°C for 10 minutes and compressor stop for 1 hour or outdoor temperature is higher than -5°C for 10 minutes, then the unit will return to work.
- * Fault Symptom: The display board shows a garbled code or a code that is not an error code found in the service manual nor a temperature reading.

Trouble shooting:

Use the remote controller. If the unit does not respond to the remote, the indoor PCB needs to be replaced; if the unit does respond, then the display board needs to be replaced.

8.2 Diagnosis and Solution

8.2.1 EEPROM parameter error diagnosis and solution(E0/F4)

Error Code	E0/F4
Malfunction decision conditions	Indoor or outdoor PCB main chip does not receive feedback from EEPROM chip.
Supposed causes	Installation mistake PCB faulty

Trouble shooting:

EEPROM: a read-only memory whose contents can be erased and reprogrammed using a pulsed voltage. For the location of EEPROM chip, please refer to the below photos.

Indoor PCB

Outdoor PCB

Note: The two photos above are only for reference, it's may be not same totally with the ones on your side.

8.2.2 Indoor / outdoor unit's communication diagnosis and solution(E1)

Error Code	E1
Malfunction decision conditions	Indoor unit does not receive the feedback from outdoor unit during 110 seconds and this condition happens four times continuously.
Supposed causes	Wiring mistake Indoor or outdoor PCB faulty

S and N
or
L2 and S
Or
2 and 3

Remark:

Use a multimeter to test the DC voltage between 2 port and 3 port of outdoor unit. The red pin of multimeter connects with 2 port while the black pin is for 3 port.

When AC is normal running, the voltage will move alternately between -25V to 25V.

If the outdoor unit has malfunction, the voltage will move alternately with positive value.

While if the indoor unit has malfunction, the voltage will be a certain value.

Remark:

Use a multimeter to test the resistance of the reactor which does not connect with capacitor.

The normal value should be around zero ohm. Otherwise, the reactor must have malfunction.

8.2.3 Zero crossing detection error diagnosis and solution (E2)

Error Code	E2	
Malfunction decision conditions	When PCB does not receive zero crossing signal feedback for 4 minutes or the zero crossing signal time interval is abnormal.	
Supposed causes	Connection mistake PCB faulty	

8.2.4 Fan speed has been out of control diagnosis and solution(E3)

Error Code	E3/F5
Malfunction decision conditions	When indoor fan speed keeps too low (300RPM) for certain time, the unit will stop and the LED will display the failure.
Supposed causes	 Wiring mistake Fan ass'y faulty Fan motor faulty PCB faulty

Index 1:

1:Indoor or Outdoor DC Fan Motor(control chip is in fan motor)

Power on and when the unit is in standby, measure the voltage of pin1-pin3, pin4-pin3 in fan motor connector. If the value of the voltage is not in the range showing in below table, the PCB must has problems and need to be replaced.

DC motor voltage input and output(voltage: 220-240V~)

NO.	Color	Signal	Voltage
1	Red	Vs/Vm	280V~380V
2			
3	Black	GND	0V
4	White	Vcc	14-17.5V
5	Yellow	Vsp	0~5.6V
6	Blue	FG	14-17.5V

DC motor voltage input and output(voltage :115V~)

NO.	Color	Signal	Voltage
1	Red	Vs/Vm	140V~190V
2			
3	Black	GND	0V
4	White	Vcc	14-17.5V
5	Yellow	Vsp	0~5.6V
6	Blue	FG	14-17.5V

2. Outdoor DC Fan Motor (control chip is in outdoor PCB)

Power on ,and check if the fan can run normally, if the fan can run normally, the PCB must has problems and need to be replaced, If the fan can't run normally, measure the resistance of each two pins. If the resistance is not equal to each other, the fan motor must have problems and need to be replaced, otherwise the PCB must has problems and need to be replaced.

3. Indoor AC Fan Motor

Power on and set the unit running in fan mode at high fan speed. After running for 15 seconds, measure the voltage of pin1 and pin2. If the value of the voltage is less than 100V(208~240V power supply) or 50V(115V power supply), the PCB must has problems and need to be replaced.

8.2.5 Open circuit or short circuit of temperature sensor diagnosis and solution(E5)

Error Code	E4/E5/F1/F2/F3
Malfunction decision conditions	If the sampling voltage is lower than 0.06V or higher than 4.94V, the LED will display the failure.
Supposed causes	Wiring mistakeSensor faulty

8.2.6 Refrigerant Leakage Detection diagnosis and solution(EC)

Error Code	EC
Malfunction decision conditions	Define the evaporator coil temp.T2 of the compressor just starts running as Tcool. In the beginning 5 minutes after the compressor starts up, if T2 <tcool—2°c(tcool—35.6°f) "ec"="" 3="" 4="" ac="" and="" area="" continuous="" display="" does="" happens="" keep="" not="" off.<="" seconds="" show="" situation="" td="" the="" this="" times,="" turn="" will=""></tcool—2°c(tcool—35.6°f)>
Supposed causes	 T2 sensor faulty Indoor PCB faulty System problems, such as leakage or blocking.

8.2.6 Overload current protection diagnosis and solution(F0)

Error Code	F0
Malfunction decision conditions	An abnormal current rise is detected by checking the specified current detection circuit.
Supposed causes	 Power supply problems. System blockage PCB faulty Wiring mistake Compressor malfunction

8.2.7 IPM malfunction or IGBT over-strong current protection diagnosis and solution(P0)

Error Code	P0
Malfunction decision conditions	When the voltage signal that IPM send to compressor drive chip is abnormal, the display LED will show "P0" and AC will turn off.
Supposed causes	 Wiring mistake IPM malfunction Outdoor fan ass'y faulty Compressor malfunction Outdoor PCB faulty

Trouble shooting:

For 9K~24K:

For example:

Note: The photos below are only for reference, it's may be not same totally with the ones on your side.

P-U

P-V

P-W

N-U

N-V

For 30K~36K:

At first test the resistance between every two ports of U, V, W of IPM and P, N. If any result of them is 0 or close to 0, the IPM is defective. Otherwise, please follow the procedure below:

8.2.8 Over voltage or too low voltage protection diagnosis and solution(P1)

Error Code	P1
Malfunction decision conditions	An abnormal voltage rise or drop is detected by checking the specified voltage detection circuit.
Supposed causes	Power supply problems.
	System leakage or blockPCB faulty

Trouble shooting:

Remark:

Measure the DC voltage between P and N port. The normal value should be around 310V.

8.2.9 High temperature protection of IPM module or compressor top diagnosis and solution(P2)

Error Code	P2
Malfunction decision conditions	If the sampling voltage is not 5V, the LED will display the failure.
Supposed causes	Installation mistakePower supply problems.
	System leakage or block
	PCB faulty

Trouble shooting:

For MSABD-18HRFN1-MQ0W, MSABE-23HRFN1-MQ0W,

For other models,

8.2.10 Inverter compressor drive error diagnosis and solution(P4)

Error Code	P4
Malfunction decision conditions	An abnormal inverter compressor drive is detected by a special detection circuit, including communication signal detection, voltage detection, compressor rotation speed signal detection and so on.
Supposed causes	 Wiring mistake IPM malfunction Outdoor fan ass'y faulty Compressor malfunction Outdoor PCB faulty

Trouble shooting:

For 9K~24K:

IPM continuity check

Turn off the power, let the large capacity electrolytic capacitors discharge completely, and dismount the IPM. Use a digital tester to measure the resistance between P and UVWN; UVW and N.

Digital tester		Normal resistance value	Digital tester		Normal resistance value	
(+)Red	(-)Black		(+)Red	(-)Black		
	N	∞	U		∞	
	U	₩	V	N	(Several MΩ)	
	V	(Several MΩ)	W			
	W		(+)Red			

For 30K~36K:

At first test the resistance between every two ports of U, V, W of IPM and P, N. If any result of them is 0 or close to 0, the IPM is defective. Otherwise, please follow the procedure below:

8.2.11 Low pressure protection diagnosis and solution(P6)

Error Code	P6
Malfunction decision conditions	When the pressure of system reach a certain value, the low pressure protector will switch off. After the pressure resume to normal ,the protection code will disappear.
Supposed causes	 Wiring mistake Pressure protector faulty Fan motor faulty PCB faulty System problems.

Trouble shooting: Only for 36K models,

Main parts check

1. Temperature sensor checking

Disconnect the temperature sensor from PCB, measure the resistance value with a tester.

Tester

Temperature Sensors.

Room temp.(T1) sensor,

Indoor coil temp.(T2) sensor,

Outdoor coil temp.(T3) sensor,

Outdoor ambient temp.(T4) sensor,

Compressor discharge temp.(TP) sensor.

Measure the resistance value of each winding by using the multi-meter.

Appendix 1 Temperature Sensor Resistance Value Table for T1,T2,T3,T4 (°C--K)

Appendix 4

Normal voltage of P and N								
208	380-420V(3-phase)							
In standby	In standby							
	around 530VDC							
In operation								
With passive PFC module	/							
>200VDC	>310VDC	>370VDC	>450VDC					

2.Compressor checking

Measure the resistance value of each winding by using the tester.

Position	Resistance Value						
	ASN98D22UFZ	ASM135D23UFZ	ATF235D22UMT	ATF250D22UMT			
Blue - Red							
Blue - Black	1.57 Ω	1.75 Ω	0.75 Ω	0.75 Ω			
Red - Blue
